PROFESSIONAL EXPERIENCE

HCLTECH

HYDERABAD, INDIA

Graduate Engineer Trainee (GET) | Java Full Stack Developer

Feb 2026 – Present

- Contributing to Java Full Stack application development leveraging 5+ core technologies, including Java, Spring Boot, React.js, SQL, and RESTful APIs.
- Supported multiple Spring Boot migration initiatives by analyzing application components, implementing required code enhancements, and developing a Copilot AI agent to assist with Spring Boot version migration.
- Analyzed Jira stories and resolved React.js defects through systematic debugging, root-cause analysis, and targeted code remediation, ensuring accurate and reliable application functionality.
- Strengthened code quality and test coverage by supporting test-case development, defect validation, and comprehensive verification of application changes throughout the development lifecycle.

Java Full Stack Development Trainee

Chennai, India | Sep, 2025 – Jan, 2026

- Built proficiency across 7 core technologies Java, Spring Boot, React.js, JavaScript, SQL, REST APIs, and Microservices applying Spring Data JPA, layered architecture, and DTOs.
- Engineered a Food Truck Full Stack application with authentication, 3 role-based users Manager, Staff, and Customer and 4 key workflows: ordering, menu management, inventory, and sales insight.

EDUCATION

MATURI VENKATA SUBBA RAO ENGINEERING COLLEGE

HYDERABAD, INDIA

Bachelor of Engineering, Computer Science & Engineering

2021 – 2025

SKILLS

- **Programming:** Java, JavaScript, Python, SQL, C, C++
- **Backend:** Spring Boot, Spring MVC, RESTful APIs, Microservices, CRUD Operations
- **Frontend:** React.js, HTML5, CSS3
- **Databases:** MySQL, PostgreSQL
- **Tools:** Git, GitHub, Maven, Jira, Postman, JUnit
- **Cloud:** AWS EC2, Cloud Fundamentals
- **AI & Machine Learning:** Machine Learning, Deep Learning, CNN, GAN, ResNet50, EfficientNet-B0, U-Net, SPADE

PROJECTS

Food Truck Microservices System

Engineered a full-stack food ordering application with authentication and 3 role-based users—Manager, Staff, and Customer. Implemented 4 key workflows: customer ordering, menu management, inventory updates, and sales insights. Developed RESTful APIs using Spring Boot and integrated Spring Data JPA, DTO-based design, Eureka, API Gateway, and Feign Client for microservices communication and data management.

Automated Weed Detection Using Deep Learning

Developed an automated weed detection system using deep learning for image classification. Implemented and evaluated 2 CNN architectures—ResNet50 and EfficientNet-B0—through data preprocessing, model training, testing, and accuracy analysis. Applied GAN-based augmentation with U-Net and SPADE to improve dataset quality and model generalization.
